Individual Contribution

In this project, I'm mainly responsible for writing the coding part with application of libraries and api. I tried several methods to pursue the goal. I followed the tutorial of the api we used in this project to draw the bounding boxes of hand. I tried to do the hand gesture detection, but we didn't have much progress on this part.

I also wrote the powerpoint of the presentation and checked it with my team member. For the proposal, I also wrote it with my team member.
